DETAILED ACTION

Allowable Subject Matter

1. Claims 6-8 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-5 and 9 rejected under 35 U.S.C. 103(a) as being unpatentable over Shinohara (6,245,603) in view of Arima et al. (5,489,791) further in view of Oda et al. (5,945,710).

Regarding Claims 1-5 and 9, Shinohara discloses in Fig. 3A and Fig. 4A-4C, it is disclosed a P-type semiconductor substrate 110, gate electrode on top of the gate oxide layer which are both not labeled, source/drain layer 123a which extends from the source/drain side to underneath the gate. Also, on top of the sour-drain layer, there are pockets of lightly doped layers 144a. Shinora fails to disclose the required depth requirement and the required conductivity/doping requirement. However, Arima et al. disclose a field effect transistor having impurity regions of different depths and manufacturing method thereof where in Figs. 2A-2H, the required depth requirement is disclosed. Furthermore, Oda et al. disclose a semiconductor

device with doped contact impurity regions having particular doping levels where in Figs. 15-17 and 23 the required doping/conductivity structure is disclosed.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required depth and doping/conductivity structures in Shinohara as taught by Arima et al. and Oda et al. respectively in order to have a semiconductor structure with ease of manufacture.
